extraordinary Black Plague pandemic that swept through the British Isles in 1665, Evelyn Lord focuses on the plague's effects on smaller towns, where every death was a singular blow affecting the entire community. Lord's fascinating reconstruction of life during plague times presents the personal experiences of a wide range of individuals, from historical notables Samuel Pepys and Isaac Newton to common folk who tilled the land and ran the shops. The Great Plague brings this dark era to vivid life through stories of loss and survival from those who grieved, those who fled, and those who hid to await their fate. Includes maps, photos, and illustrations

A time of horror has come to London. In one terrible summer, more than 15% of its population will perish. As the bubonic plague ravages London's streets, mercilessly plucking up victims and filling the plague pits with corpses, 13-year-old Alice Paynton records the outbreak in her diary. "It seems that in the past week 700 people have died of the plague. So the plague has well and truly come to London... One of the houses in the next street had a red cross painted on the door. Above the cross someone had chalked Lord Have Mercy Upon Us." Alice's chilling diary brings alive one of the darkest moments in British history: the Great Plague of 1665-1666.

From the acclaimed author of *Miracle Cure* and *The Third Horseman*, the epic story of the collision between one of nature's smallest organisms and history's mightiest empire. During the golden age of the Roman Empire, Emperor Justinian reigned over a territory that stretched from Italy to North Africa. It was the zenith of his achievements and the last of them. In 542 AD, the bubonic plague struck. In weeks, the glorious classical world of Justinian had been plunged into the medieval and modern Europe was born. At its height, five thousand people died every day in Constantinople. Cities were completely depopulated. It was the first pandemic the world had ever known and it left its indelible mark: when the plague finally ended, more than 25 million people were dead. Weaving together history, microbiology, ecology, jurisprudence, theology, and epidemiology, *Justinian's Flea* is a unique and sweeping account of the little known event that changed the course of a continent.

A spine-chilling saga of virulent racism, human folly, and the ultimate triumph of scientific progress. For Chinese immigrant Wong Chut King, surviving in San Francisco meant a life in the shadows. His passing on March 6, 1900, would have been unremarkable if a city health officer hadn't noticed a swollen black lymph node on his groin—a sign of bubonic plague. Empowered by racist pseudoscience, officials rushed to quarantine Chinatown while doctors examined Wong's tissue for telltale bacteria. If the devastating disease was not contained, San Francisco would become the American epicenter of an outbreak that had already claimed ten million lives worldwide. To local press, railroad barons, and elected officials, such a possibility was inconceivable—or inconvenient. As they mounted a cover-up to obscure the threat, ending the career of one of the most brilliant scientists in the nation

in the process, it fell to federal health officer Rupert Blue to save a city that refused to be rescued. Spearheading a relentless crusade for sanitation, Blue and his men patrolled the squalid streets of fast-growing San Francisco, examined gory black buboes, and dissected diseased rats that put the fate of the entire country at risk. In the tradition of Erik Larson and Steven Johnson, Randall spins a spellbinding account of Blue's race to understand the disease and contain its spread—the only hope of saving San Francisco, and the nation, from a gruesome fate.
